History AutoCAD was first developed as a tool to provide drafting and design professionals with a way to easily create 3D drawings of products. In those early days, CAD did not exist as a user-friendly application, which made the software unsuitable for mass-market usage. AutoCAD's origins can be traced back to the late 1960s, when developers at IBM (Software) Inc. were looking to develop a design program that could easily create 3D drawings and illustrations of products. In 1969, they released the first version of AutoCAD, an acronym for Automatic Computer-Aided Drafting, which was the name of their new software. The first release was a display program, which meant that users were required to interact with the screen, and not the computer. The first non-graphical release followed in 1971, and was named AutoCAD Graphics. The company continued developing AutoCAD into a user-friendly application that would require very little user interaction. In 1982, AutoCAD was used to create the world's first computer-aided design (CAD) model of the space shuttle. The real space shuttle was not returned until 1996, when its pieces were pieced together and brought back to Earth. In 1994, AutoCAD was integrated with WordPerfect 5.5 to allow the developer to build a graphical programming language. This tool was named VLISP. In 1995, the first version of AutoCAD Map 3D was released, which provided direct, satellite imagery-based 2D and 3D mapping capabilities. This technology helped improve mapmaking by decreasing the time it takes to create a map. In 1996, AutoCAD was used to create the first design of a car, based on the Caterham Spyder. This car was later put into production and marketed by the manufacturer as the Caterham Seven. In 1997, AutoCAD was integrated with WYSIWYG word processors, which allowed users to design a product and have the final output be printed on a sheet of paper. This was the first time that CAD was used for drafting. In 1998, AutoCAD Map 3D was integrated with AutoCAD R13. This allowed the user to turn geographic data into 3D maps. This technology is also used for the 3D maps in Google Earth. In 1999, AutoCAD VX was introduced. This was the first version of AutoCAD to be capable of writing 3D a1d647c40b
