It can open files of all the following formats: Microsoft Excel Microsoft Word .txt HTML files HTML HTML pages MS SQL .dat .rdl PDF MS Excel MS Word CSV CSV (comma-separated) CSV (pipe-separated) TXT CSV (pipe-separated) CSV (comma-separated) Image files

### What's New In SetSystemFileCacheSize?

The .NET Framework presents the standard File I/O interface to the developers. But it offers a lot more as well. You can use the System.IO.FileSystem namespace to perform many more I/O operations than just reading and writing files. System.IO.FileSystem can also be used in conjunction with the .NET Framework or .NET Core to perform I/O using other mechanisms than the File I/O library, such as accessing network resources and databases. System.IO.FileSystem is a wrapper library for standard I/O operations. The FileSystem File I/O API consists of a set of interfaces that perform operations on a file system. System.IO.FileSystem exposes a set of methods and properties that allow you to read, write, copy, move, delete, rename, or list files or directories from or to disk. Use the FileSystem namespace to: - File access methods such as OpenRead, OpenWrite, Create, or CreateDirectory - Retrieve information about a file or directory - Read and write data to and from files - Copy a file or directory to another location - Move a file or directory - Copy and move data across networks - List the files and directories on a disk drive You can use the following FileSystem types to create a connection to the disk or other network location: - Directory - File - FTPFile - HTTPFile - LocalFile - NetworkFile - PhysicalFile - PhysicalDirectory - PipeStream - PipeStreamReader - PipeStreamWriter - PhysicalNetworkStream - PhysicalNetworkStreamReader - PhysicalNetworkStreamWriter - PipeStreamWriter - PhysicalDirectoryInfo - System.IO.Pipelines You can also create a connection to a database by calling the CreateDatabaseConnection method. You can use the following FileSystem File I/O API interfaces to perform file operations: - DirectoryInfo - FileInfo - DirectoryInfo - FileInfo - FileStream - FileStream - FileStreamInfo - IEnumerable - IOException - IOException - OverloadException - PhysicalDirectoryInfo - PhysicalDirectoryInfo - FileAttributes - GetFileAttributes - IOException - OverloadException - PathTooLongException - GetFileSystemEntries - DirectorySecurity - FileSecurity - DirectorySecurity - GetAccessControl - GetAccessControl - FileAttributes - IOException - OverloadException - PathTooLongException - GetAccessControl - DirectorySecurity - GetAccessControl - DirectorySecurity - IOException - OverloadException - PathTooLongException - FileAttributes - GetAccessControl - FileSecurity You can use the following FileSystem File I/O API interfaces to open a stream: - FileStream - IOException

---

**System Requirements For SetSystemFileCacheSize:**

Minimum: OS: Windows 7, Windows 8, Windows 8.1, Windows 10 Processor: Intel Core 2 Duo, AMD Phenom II x4, AMD Ryzen 3 or better Memory: 2 GB RAM Hard Drive: 20 GB available space DirectX: Version 11 Network: Broadband Internet connection Sound Card: DirectX compatible Additional Notes: - Must have English as a primary language Recommended: OS: Windows 7, Windows 8, Windows 8.1
