XCF, or X for short, is a file format which supports text, graphics, and other data in a single file, and can be used interchangeably with other graphics file formats. Introduced in May 2003, XCF is the replacement for TIFF, and supersedes PDF in this regard. XCF files are text-based. It is based on the Tagged Image File Format (TIFF) developed by Adobe, and has been approved as a native file format for both Windows and Mac OS X. There is a free version, but there are also commercial software products which can import/export XCF files into/from AutoCAD (see list below). Run Go to File->Import->Import as objects or DWG/DWF (\*.dwg, \*.dwt) then select your \*.dwg (which is the rar file) Finish the import. Go to File->Export->Export as XML. Finish the export. A: I had the same issue, but finally figured it out. First you have to download the AutoCAD beta, because they have removed the import and export from the Autocad standard, and replaced it with the Beta version. I'm not sure what versions are the last stable version and the beta version, but the beta version won't work, and the standard won't allow you to save to any format. Secondly, make sure you have these versions of the software. Autocad 2010 Autocad 2010 SP1 Autocad 2010 XE Autocad 2011 Autocad 2010 Autocad 2012 For my issue the beta version of 2010 was the issue. It was refusing to save to any format. I downgraded to the standard version and that solved the issue. Q: How to add autoincrement to user\_id using Laravel I am creating a simple inventory app and in my inventory model I have \$incrementing = true; \$timestamps = true; public function \_\_construct() { \$this->table = 'inventory'; \$this->primaryKey = 'user\_id'; } Then I have a function that creates a table row public function newRow() { return \$this->insertGetId(); } And then I have a function that creates a new row using the data in the row public function createRow(\$user\_id, \$model\_id, \$price, \$quantity, \$unit, \$gender) { \$model = \$this->model[\$model\_id]; \$model->user\_id = \$user\_id; \$model->save(); \$row = \$this->newRow(); if (!empty(\$price)) { \$row->price = \$price; } if (!empty(\$quantity)) {

Apply drawing conventions on all your drawings, using color-coding to show layers, layers on top of each other, and so on. (video: 2:45 min.) Draw with styles in your drawings: Create styles for your shapes and parts, then apply them to your drawings. (video: 3:20 min.) Numeric precision: Align and offset to work with even the tiniest measurements, including fractions and decimals. CAD lighting: Take advantage of two options for computer lighting: daylight and auto, to create accurate lighting conditions. With Daylight, light sources reflect off of, for example, parts of a drawing and reveal shadows in your drawing. With Auto, AutoCAD adjusts the light sources to simulate real-life light conditions. (video: 1:40 min.) Document collaboration and annotation: Work with other people from anywhere in the world. Share drawing and annotation documents with others using the cloud, including large file sizes. (video: 3:05 min.) Revit MEP: Create 3D models for buildings and infrastructure and integrate them into your drawings in Revit MEP. Create and edit 3D models of buildings and elements, then add them to your drawings.
