I have a C# application that is running on the same box (system) where the Microsoft Office (2007) is installed. This application is logging errors from the Office application. I've done a lot of searching with no luck. I'm hoping someone can help me find a solution. Regards Kendall A: The problem is that you are using the same user session from Office, so you have to create a new one in the application or at least to copy a new profile.
