This will allow us to calculate the time for any planet to pass through an orb. Of course each planet have a different orb, however in the longest terms the orbs can be considered to be equal to an orb of 2° in radius for the sun, 2.2° for the moon, 2.4° for Mercury, 3° for Venus, 8.5° for Earth, 4.6° for Mars, and 24° for Jupiter and Saturn, but the calculation of the duration is the same.
