It's All About the Eye Photoshop and other products like it really are about the eye — where the focal point of an image is. But a good image can be a result of another combination of both the eye and software. The eye is everything, but software is a very important part of getting a good image. The eye is always looking for something. It wants to see a subject against a dark background and in focus. It also loves highlights, like when a subject is brilliantly lit. Contrast makes an image pop when a subject is dark against a bright background. ## Making Photos More Interesting by Adding Special Effects Adding special effects adds _surprise_ (the great colors, patterns, and lights in an image) and _excitement_ (the elements of fun and entertainment that make an image interesting, such as funky shapes or lights). It can also emphasize the subject and create visual interest, as when a subject is created by another subject. The best special effects occur when you combine many aspects of an image. The following list details some of the most common special effects techniques that can be added to images: * **Special effects:** Tweaking contrast, saturation, color, and hue * **Animate:** Adding movement to an image — both simple movement, such as the rising of the sun, and complex movement, such as wind blowing through a field of grass * **Grading:** Adding different looks to an image * **Artistic:** Creating beautiful abstract images * **Layered images:** With layers, you can build an image by combining multiple images * **Swatches:** Many different colors can be added to an image to make an image more exciting ## Adding Special Effects In Photoshop, special effects are often easier to add than to remove, especially if you keep the image looking realistic. Photoshop includes some pre-installed special effects that you can apply to images. They include the following: * **Free-form or fractal:** Artistic manipulation of shapes. The results are sometimes surreal and hard to predict. Often when you zoom in on an image, the special effects disappear; they should remain even when you zoom out so that you can be surprised by the results. * **Texture:

If you have a list or queue of things you need to do at some time in the future, the ideal resolution mechanism is a workflow: A workflow is a list of tasks; the workflow manager, which may or may not be external to the application, provides the interface to interact with the list. When an action is performed, the workflow takes care of the next action in the list. Workflows are application independent; some applications, like spreadsheets and database tools, have built-in workflow engines. When I'm explaining workflow with the example of a queue manager, I'm usually talking about a "Pipeline" workflow, if you're familiar with that term. Note that a "Pipeline" workflow isn't just a list of tasks, that the user controls manually; it's a list of tasks that the user can't control manually. Today we'll see how we can do a simple queue manager with a workflow-based "Pipeline". You'll see that workflow-based queue management is very similar to a queue management with "Tasks" or "Job". In this case, the main task is tracking the workflow, and the workflow is tracking the progress and completion of the tasks. The user creates the workflow in a text editor; it consists of one or more "steps". Each step has one or more tasks. The workflow then can start at any time; to start it, the user just has to click a button. When the workflow starts, the user has a progress bar to track the progress of all steps. The workflow has a "status" that shows the current state of the workflow: New step Waiting for tasks Running all tasks Stopped In this case, we start with just a single step, then add a second one. When the user clicks the "Cancel workflow" button, the workflow is cancelled. All the steps are running in the background, but aren't visible to the user. To see what the user is doing, the user can check the workflow's "status". When the user clicks the "finish" button, all steps are cancelled except the last one. The last
